| Crop | Stage | Weather Based Agro Advisory |
|---|---|---|
| Forecast | - | • Today's forecast for the district indicates light to moderate rainfall at few places on 24 and 28 July , at one to two places during 25-26 July and at most places on 27 july There will be rise in maximum temperature by 2-4°C in 48 hours, thereafter no large change in subsequent days over vidharbha region. Download DAMINI App for updated warning alert of lightning. |
| General | Growth | • In timely sown all kharif crops undertake inter culture operation (weeding / hoeing) during clear weather, for management of weeds under proper vapsa condition.<br>• In timely sown all kharif crops fertilizer dose of nitrogen should be carried out after one month sowing.<br>• For weed control in timely sown soybean and cotton alternative option of recommended early post emergence herbicidal spray (with label claim) at proper stage and proper soil moisture condition should be undertaken after current spell of rains.<br>• Need based Gap filling and thinning operation may be carried out under sufficient soil moisture condition. |
| Soybean | Growth | • In timely sown soybean crop undertake inter culture operation (weeding / hoeing) during clear weather for management of weeds and improved soil aeration.<br>• For weed control in timely sown soybean, alternative option of recommended early post emergence herbicidal spray (with label claim) at proper stage and proper soil moisture condition should be undertaken. |
| Cotton | Growth | • Need based gap filling may be undertaken to maintain optimum plant population in irrigated fields.<br>• In timely sown all kharif crops fertilizer dose of nitrogen should be carried out after one month sowing.<br>• In timely sown cotton crop undertake inter culture operation (weeding / hoeing) during clear weather for management of weeds and improved soil aeration.<br>• For weed control in timely sown cotton, alternative option of recommended early post emergence herbicidal spray (with label claim) at proper stage and proper soil moisture condition should be undertaken. |
| Pigeon pea | Growth | • Need based gap filling may be undertaken to maintain optimum plant population in irrigated fields.<br>• In timely sown all kharif crops fertilizer dose of nitrogen should be carried out after one month sowing.<br>• In timely sown pigeon pea crop undertake inter culture operation (weeding / hoeing) during clear weather for management of weeds and improved soil aeration. |
| Greengram / Blackgram | Growth | • In timely sown green gram crop undertake inter culture operation (weeding / hoeing) during clear weather for management of weeds and improved soil aeration. |
| Sorghum | Growth | • Need based gap filling may be undertaken to maintain optimum plant population in irrigated fields.<br>• In timely sown all kharif crops fertilizer dose of nitrogen should be carried out after one month sowing.<br>• In timely sown sorghum crop undertake inter culture operation (weeding / hoeing) during clear weather for management of weeds and improved soil aeration. |
| Maize | Growth | • Need based gap filling may be undertaken to maintain optimum plant population in irrigated fields.<br>• In timely sown all kharif crops fertilizer dose of nitrogen should be carried out after one month sowing.<br>• In timely sown maize crop undertake inter culture operation (weeding / hoeing) during clear weather for management of weeds and improved soil aeration. |
| Fruit crops | Plantation | • Complete the plantation of all fruit crops in the area with sufficient monsoon rains.<br>• In ambia bahar mandarin and sweet orange orchards, damaged twigs from sudden rain/thunderstorm be removed and cut ends be smeared with Bordeaux paste (1 kg lime + 1 kg CuSo4 + 10 liter water).<br>• During this month there is rapid spread of citrus canker in acid lime (lemon) hence the affected leaves, branches should be pruned and burnt. Spray copper oxychloride180 gm with streptocycline 6 gm in 60 liters of water before the onset of the monsoon. Repeat the spray 3-4 times at an interval of 30 days. |
| Vegetable | Trans plantation / Nursery | • Before transplanting chilly seedlings, dip the tops of the seedlings in a solution of 10 ml of Dimethoate 30% + 3 g of water soluble sulphur (80%) + 2.5 g of Mancozeb in one liter of water.<br>• Before transplanting brinjal seedlings, dip the tops of the seedlings in a solution of 10 ml of 30% dimethoate per 10 liters of water. |
| Livestock | - | • Ensure sufficient feed and medication for livestock to last through prevailing intermittent disruption.<br>• Undertake maintenance and repair of animal shelter and water points. Also ensure proper care and management of livestock during rainy season.<br>• External and Internal parasite cases increase in rainy season so take care of it with consulting the veterinary doctor.<br>• Enrichment of poultry feed with vitamin "C" and "E" is advisable. |
